

**An oil painting of a white unicorn and a pink rabbit in an enchanted forest on a sunny day.**

- ▶ AI image generators, such as Canva, DALL.E and ImageFX, create unique images from text prompts.
- ▶ Image generation is a generative form of AI - they are deep-learning models that are trained on huge amounts of raw data —and “learn” to generate realistic outputs when prompted.

**A photo of a dark cave filled with glittering jewels lit by a single shaft of light from a crack in the roof.**

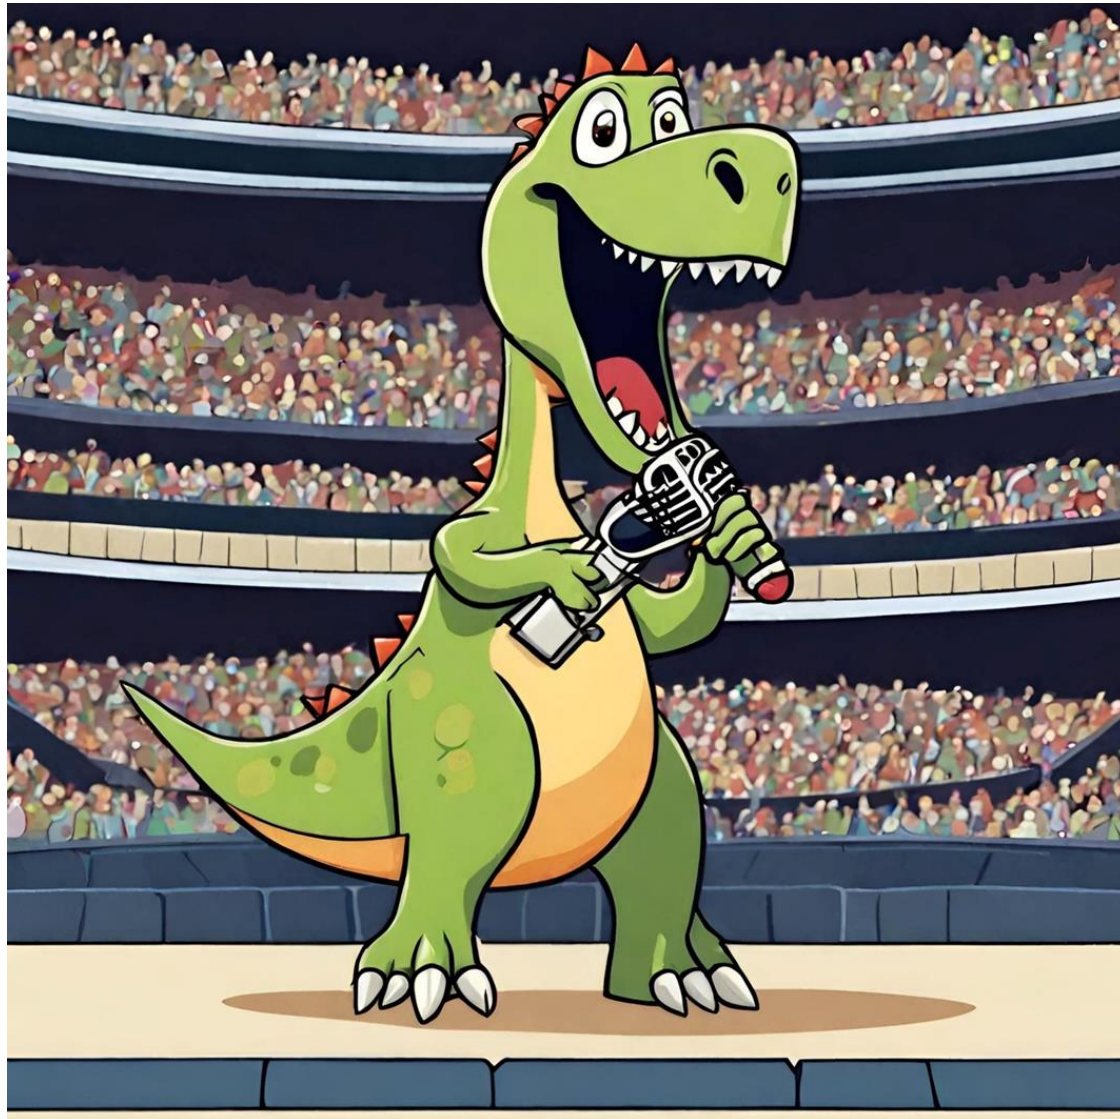

- ▶ The more specific you can be with your prompts the closer the images will be to what you want.

**A green cartoon dinosaur singing in a concert in a stadium.**

- ▶ You can specify the style of image that you want, anything from a realistic photo to a cartoon, an oil painting to Anime.

**A photo of a small boy in a blue coat holding a red balloon.**

- ▶ AI finds aspects of a human very difficult to get right. In this case, if you zoom in, the face isn't very well defined.
- ▶ AI learns though and improves each time it is used, the latest versions of image generators is a huge improvement on the previous versions.
- ▶ Image created by Canva AI Image Generator

A photo of a young girl in a green coat holding a blue umbrella on a rainy day.

- ▶ From a distance these look really good, but if you zoom in on the hands and eyes you'll see that AI still finds those aspects of a human difficult. It is improving though and will continue to improve the more it is used.
